European Certification of
Plastics Recyclers

WHAT IS EUCERTPLAST?

EuCertPlast is a European wide certification aimed at post-consumer plastics recyclers.

The **purpose** of EuCertPlast is to **recognise plastics recyclers operating at high standards**. This certification gives confidence to suppliers and costumers that any input waste plastic and output produced in a certified facility will be treated according to best practices.

The certification works according to the **European Standard EN 15343:2007** and aims at encouraging an environmentally friendly recycling of plastics by standardizing it. It particularly focuses on traceability in the supply chain, throughout the recycling process and recycled content quantity in the end product.

OUR AIM

- Increase the transparency of the plastics industry
- Implement traceability of collected post-consumer waste
- Determine recycling and trading practices across Europe
- Fulfill REACH requirements and food contact compliance for recyclers

FOCUS OF THE CERTIFICATION

The certification covers the following areas:

- Operating and environmental permits required for the country of operation
- Staff training, qualifications and organisation
- Incoming material procedures and controls
- Stock management
- Recycling process and associated mass balance calculation
- Controls on recycled outputs
- Environmental protection
- Subcontracting
- Quality management and traceability

BECOME A CERTIFIED RECYCLER

1. The recycler selects an accredited EuCertPlast auditor (list available on the website)
2. The recycling plant is inspected by an auditor on-site
3. Information is exchanged between the recycler and the auditor
4. Third party checks ensure uniformity and rigorosity in all reports
5. The auditor issues a 1-year valid certification
